Investment Risks

Because the Fund substantially invests in securities for which prices may fluctuate, etc., the NAV of the Fund can fall as well as rise, influenced by factors such as fluctuations in the stock price index that the Fund tracks, fluctuations in the prices of constituent stocks, default or a material deterioration in financial conditions of those constituent companies, and other market factors, etc.

Investment principal is therefore not guaranteed, and investors may incur a loss because of a drop in the market price or the NAV. The investment trust is therefore different from a savings deposit.

※For further information, please refer to the "Investment Risks" section of the summary prospectus. The summary prospectus is available on our website.
